

JAI : Expanding the Range, the Value, the Pride of India

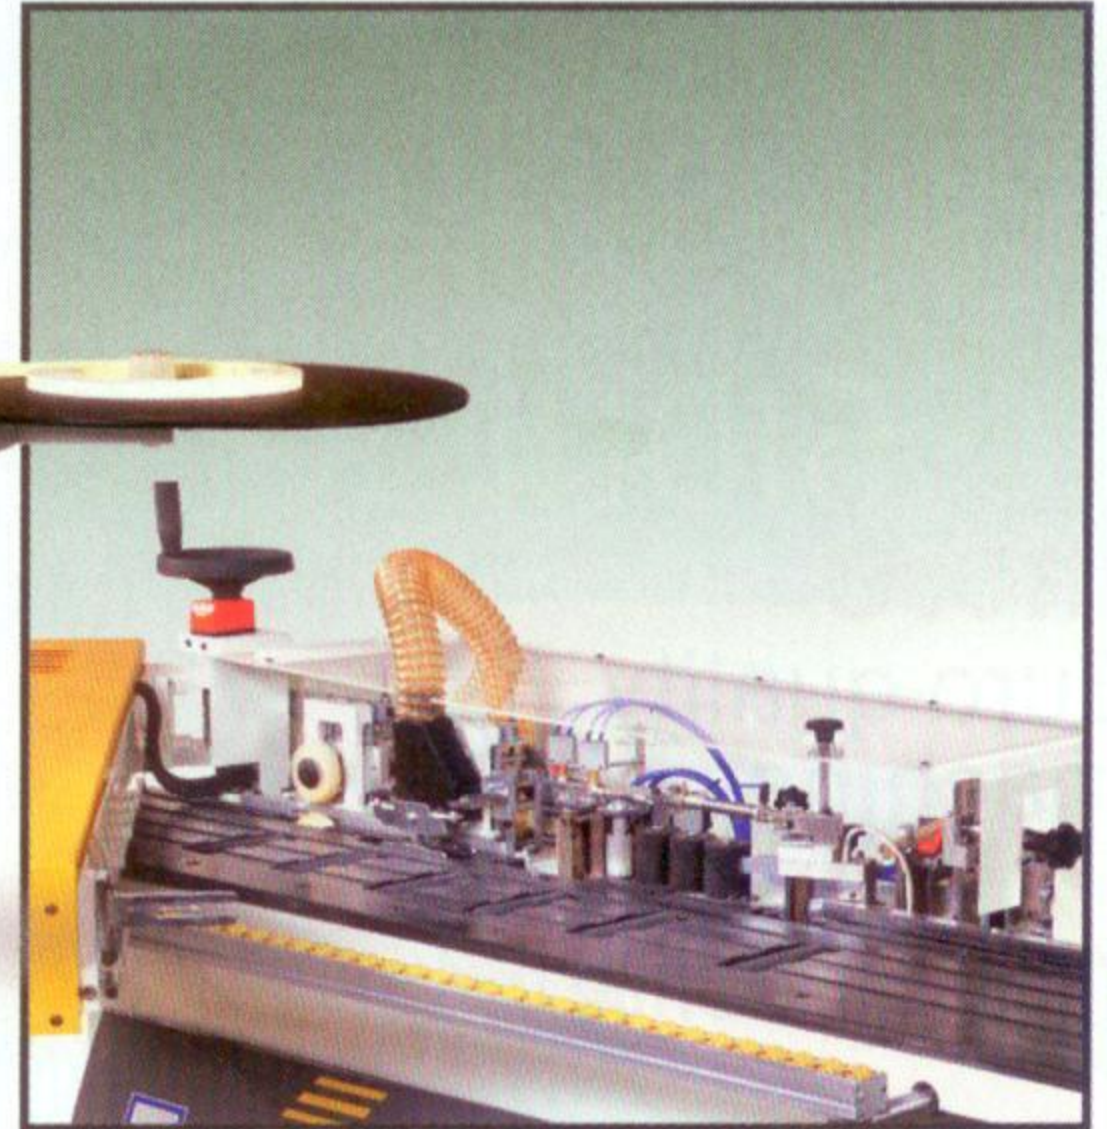

Jai Industries, the Gujarat based national leader of wood-working machinery, has appropriately named their Euro-precision range of panel-process machinery as 'Pride of India'. Four years back they were the first Indian company to manufacture Euro-precision panel processing machines in-house.

Since then 'Pride of India' range has gained a lot of ground in India, making Jai Industries the leader of that segment as well, number of machine installation-wise.

'Pride of India' (Pol in short), is now expanding its range by introducing several of new machines. Pol is part of JAI's hugely popular, highest selling 'Modula Range'. You can see some of them on these pages. Designed with an eye for aesthetics, engineered with utmost precision and manufactured with latest technology to serve Indian industry like never before; these machines are sure to increase the reputation of 'Pride of India' in the world.

Take a glimpse of it. FIRST machines are Auto Edge Banders. JAI had J-5000.in model, which has proved its mettle in the market, with

all the necessary features like feeding, banding, cutting, trimming, scraping and buffing of edge. Now there are 2 new models, J-5000R.in: with unique 'Round Cornering' feature and J-5000PR.in – with Pre-milling and Round cornering both. All models are improved through rectification and additions. A proud addition in this range is J-4000.in, an auto edge-bander of very convenient size/style and price! A lot of standard industries use either very costly European edge-banders or big-bulky less reliable indigenous machines. J-4000.in will revolutionize edge-banding with Euro-standards and Indian cost. It can take care of the industry's needs of edge banding, cutting, trimming and buffing; increasing precision/finish/production.

All-in-all Pol has an unbeatable 5 models' selection in Edge Banders (including one Curvilinear Edge Bander), offering proper budgeting and high value for money.

Second new launch is of Roller

Press, J-1200.in. This will do a great value addition to any panel-process unit. Because this Roller Press is the most effective and cost-effective solution to heat-press-n-fix laminates on panels. Hot & Cold presses are too costly and other Roller Presses available in markets can not compete the cost-quality ratio of JAI machine. It has motorized up-down movement and 4 heaters for faster/reliable performance. More and more industries are shifting to Roller press laminate fixing process, JAI – Modula's Pol model is here to satisfy them.

Third machine is Vacuum Membrane Press. Model J-1100 is most suitable for flush-door and shutters manufacturers, this JAI machine is the best in its category. Not only it looks great, it works even greater. With centralized control panel and optimizer, this Vacuum Press is capable of giving you high quality high production. It does very precise and evenly finished

lamination of up to 0.4 mm PVC, veneer or decorative papers on regular or CNC carved/designed doors and shutters. Fitted with German Bosch pump, its efficiency is doubtless. It can smoothly laminate on the second side of doors, which are already pre-laminated. For faster production, you can use 2 work trolleys from both ends of machine. Best part is, you can optionally order the second trolley anytime in future.

Equipped with this new expanded range of machinery and best after sales services in India, JAI – Modula's 'Pride of India' range is now your best bit to equip or expand your industry, your productions, your profits! The other machines in the Pol are Panel saws, Post form, Edge trimmer, Multi-boring and Spindle moulder.

Come – visit JAI Enclave at IndiaWood 2012 exhibition at Bangalore, you can see almost all Pride of India machines there and select what suits your needs most.
